## KW Gewindefahrwerke in drei Varianten

- Tieferlegen nach Mass
- Edelstahltechnik inox-line
- Grosses Lieferprogramm für alle Marken

Das weltweit wohl grösste Lieferprogramm für Gewindefahrwerke bietet die KW automotive GmbH aus Fichtenberg. Die innovativen Komplettlösungen von KW ermöglichen eine individuelle Tieferlegung innerhalb eines TÜV-geprüften Verstellbereiches. Dies bedeutet zum einen sportlichen Fahrspass bei perfekter Optik und zum anderen einen ansprechenden Fahrkomfort.

KW Gewindefahrwerke sind Kombinationen aus Tieferlegungsfedern und speziellen Stossdämpfern, die in völlig neu konstruierten Federbeinen mit Aussengewinde eine stufenlose Tieferlegung ermöglichen. In den verkürzten Federbeinen arbeiten speziell angefertigte Dämpfer mit entsprechender Dämpfungsabstimmung und Aushubverkürzung. Mittels Federtellern aus Polyamidverbundwerkstoff mit Edelstahleinlage können die Tieferlegungsfedern und somit das Fahrzeug in der Höhe stufenlos eingestellt und abgestimmt werden. Die in Edelstahltechnik inox-line gefertigten Gewindefederbeine sind zudem korrosionsbeständige und dauerhaft funktionsfähig. Die KW Gewindefahrwerke stehen in drei Dämpfungsvarianten zur Verfügung.

Das KW Gewindefahrwerk in der **Variante 1** ist das ideale Einstiegsystem für den Kunden, der auf die Erfahrung der KW-Ingenieure vertraut und die Tieferlegung selbst bestimmen möchte. In aufwendigen Fahrversuchen wird eine möglichst optimale Balance aus Sportlichkeit, Komfort und Sicherheit ermittelt und direkt in die Serie umgesetzt.

**Variante 2** ist das System für den versierten Sportfahrer, der zusätzlich zur individuellen Fahrzeugtieferlegung auch Anpassungen im Setup selbst vornehmen möchte. Die einstellbare Zugstufendämpfung ermöglicht das Nick- und Wankverhalten des Fahrzeugs zu beeinflussen und somit den Fahreindruck den eigenen Bedürfnissen anzupassen.

Die **Variante 3** ist Spitzentechnik für den anspruchsvollen Sportfahrer. Die getrennt und unabhängig voneinander einstellbare Druck- und Zugstufendämpfung erlaubt wirklich individuelle Fahrwerkanpassungen. Das einzigartige System ermöglicht mit seinen 3 Regelkreisen die Einstellung der Druckdämpfung im low-speed Bereich, während der für den Komfort entscheidende high-speed Bereich fest definiert ist.
